Ensuring Correct Maintenance

PREMATURE ENGINE WEAR AND DETERIORATION IS COMMON WITH ALL VEHICLES ON AUSTRALIAN ROADS.

Cars driving around suburban areas are more likely to suffer from deterioration and premature engine wear.

Cars engines and componentry is so often replaced yet it is so very easily prevented.

WHAT CAUSES PREMATURE WEAR.

Premature wear occurs when maintenance is not sufficiently carried out, not properly carried out or when the vehicle is abused.

The most simple thing in the engine is the engine oil. Manufactures are recommending larger and larger service intervals because technology is better. Even when the oil is better or of a higher quality/grade, oil should still be changed as frequent due to dirt/carbon sludging contamination inside the engine we all know what sandpaper does to metal. Very similar when the oil is contaminated, it is the dirt in the oil that acts as sand paper and the oil is the carrier.

HOW DO I PROTECT MY ENGINE?

Following a service schedule such as manufactures log/hand book or an experienced automotive technician.

To ensure the life expectancy of your vehicle we have collaborated a list of service procedures to ensure you get the life out of your vehicle that you deserve.

NOT ONLY!

Not only is it that your engine suffers wear, if you abuse the recommended service intervals many components can go unseen for many months. Some problems that could have been early detected and repaired, instead of leading to further damage such as suspension and steering, cooling system, electrical system, brakes, and tyres.

TYPICAL VEHICLE MAINTENANCE FOR MOST VEHICLES.

P & G Motors has a fully equipped work shop to service and repair all vehicles on the market, from tyres to engine management. It makes sense to have a **SAFE** and enjoyable car to drive!

We have put together service packages to help you have your vehicle longer.
